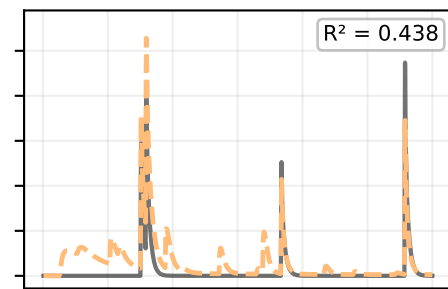

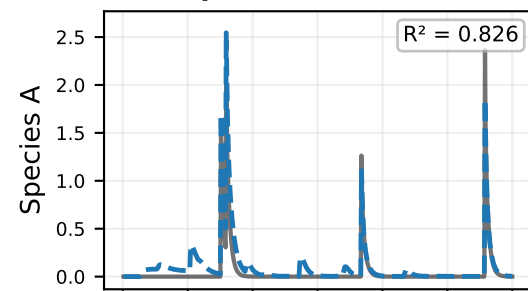

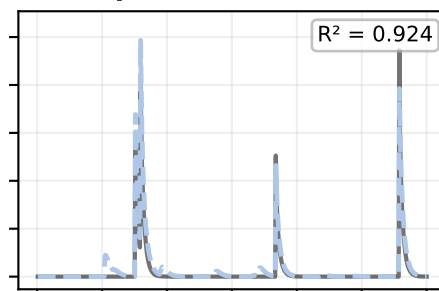

Figure 1 is a line graph showing the number of species (M) over time for two groups: 'No treatment' (blue dashed line) and 'Treatment' (brown solid line). The x-axis is labeled 'Time' and ranges from 0 to 10. The y-axis is labeled 'Species M ' and ranges from 0 to 40. The 'No treatment' group shows a rapid increase in species count, reaching approximately 37 by time 10. The 'Treatment' group shows a much slower increase, reaching approximately 17 by time 10. The R^2 value for the 'No treatment' group is -7.048.

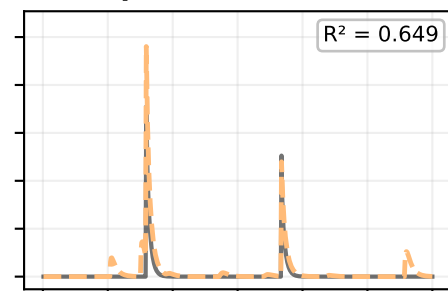

Figure 1: A line graph showing the number of species (M) over time for two different scenarios. The x-axis is 'Time' (0 to 300) and the y-axis is 'Species M ' (0 to 30). The blue dashed line represents the 'No selection' scenario, and the brown solid line represents the 'With selection' scenario. Both lines show an increasing trend, with the 'No selection' line reaching a higher plateau. A text box in the top right corner indicates $R^2 = -0.833$.
